

# TurningPoint Quick Sheet: Remote Poll Instructions for Techs

When an instructor is using Remote Poll to gather clicker data from multiple locations, the locations that aren't present in front of the instructor must launch Remote Poll from their podium computer.

1. Launch Remote Poll
2. Ensure that a Response Card is connected, if not, please contact Classroom Technology
3. Click on ResponseWare as Connection Type
4. Leave the Serve URL as <http://www.rwpoll.com>
5. Enter the Session ID in the box provided. This ID number will be given to you by the instructor.
6. There is no need to provide a Location Name
7. Click on ResponseWare Connect
8. You should see Connected to "XXXXXX"
9. The questions and possible answers will be displayed in the window below. You can see the number of responses in the window. If responses fail to be generated, make sure that students are on the correct frequency, noted on the podium by a sticker near the monitor.
10. Once the instructor has finishes, ask if they would like the session data saved. If so, you will need to email that file to them.
